It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

COMMENT

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Base-by-base quality values are not generally visible from the GenBank filet file format but are available as part of this entry's ASN:1 file. Sequence Quality Assessment:

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality.>= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. Sequence Validation:

This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

The invention relates to human G-protein coupled receptor (GCREC 1-16) polypeptides and polynucleotides. Sequences of the invention are useful for the diagnosis, treatment and prevention of cell proliferative (e.g. cancer, cirrhosis), neurological (e.g. multiple sclerosis, Huntington's disease, Alzheimer's disease), cardiovascular (e.g. angina pectoris, autoimmune/inflammatory (sheumatoid arthritis, Hashimoto's thyroiditis) and metabolic disorders (e.g. obesity, osteoporosis), viral infections, atheroselerosis and hepatitis. GCREC proteins are useful for identifying compounds that modulate, mimic and block olfactory and taste sensations. They are also useful for identifying GCREC modulators. GCREC DNAS are

The invention relates to an isolated polypeptide, which is a G-protein coupled receptor (GPCR) related to Subfamily I of G-protein coupled receptor (GPCR) related to Subfamily I of G-protein coupled receptor type proteins (GPCRs), designated the 93870 receptor. The polypeptides nucleic acid molecules and antibodies of the invention are useful in screening assays, predictive medicine (e.g. diagnostic assays, compilerative midle in the prophylactic). They are useful in creating and diagnosing conditions related to aberrant activity or expression of the 93870 polypeptides or nucleic acids, e.g. immune and inflammatory disorders, platelet disorders, skeletal or bone metabolism disorders, or bone marrow mononuclear disorders, as well as cellular proliferative and/or differentiative disorders, hormonal disorders, nucled cancer, disbetes mellitus, hypothyroidism, can be reaching and pain and metabolic disorders. Conditions that can be treathyroidism, reproductive or fertility disorders, HIV, bacterial or viral meningitis, fungal meningencephalitis, multiple sclerosis, hyperthyroidism, reproductive or fertility disorders, HIV, bacterial or viral meningitis, fungal meningencephalitis, multiple sclerosis, HIV alterner's disease, Parkinson's disease, axis axia-telanglectasia, enthancer of disease, parkinson's disease, axis axia-telanglectasia, chifarmatory bowel disease, asthma, conjunctivitis, graft-versus-host disease, asthma, espinance or osteoporosis. The transgenic animals are useful for studying the function and or indentifying and/or evaluating medicides heart invention can be used in the herapy. This polymucleotide sequence represents the cDNA of the invention.
                                                                                                          Location/Qualifiers

The invention relates to an isolated polypeptide, which is a G-protein coupled receptor (GPCR) related to Subfamily I of G-protein coupled coupled receptor type proteins (GPCR), designated the 3840 receptor. The polypeptides, nucleic acid molecules and antibodies of the invention are polypeptides, nucleic acid molecules and antibodies of the invention are controling clinical trials or pharmacognetical), or in methods of treatment (e.g. therapeutic and prophylactic). They are useful in treatment (e.g. therapeutic and prophylactic). They are useful in treatment (e.g. therapeutic and prophylactic). They are useful in the 1847 properties or nucleic acids. e.g. immune and inflammatory disorders, platelet disorders, skeletal or bone metabolism circliammatory disorders, platelet disorders, when a sellular confiscative and pain and metabolic disorders, hormonal disorders, neurological disorders, cardiovascular disorders, viral diseases, liver disorders, and pain and metabolic disorders. Conditions that can be reated include cancer, diabetes mellitus, hypochyroidism, reproductive or fertility disorders, HIV, bacrerial or viral meningitis, fungal meningoencephalitis, multiple sclerosis, hyperthyroidism, reproductive or fertility disorders, HIV, bacrerial or viral meningitis, fungal meningoencephalitis, multiple sclerosis, Huntington's disease, heart failure, angina pectoris, myocardial circliam. reproductive or fertility dermatitis, psoriasis, Crohn's disease, allergy, idiopathic thrombocytopenia, or osteoporosis and infarmatory bowel disease, asthma, conjunctivitis, graft-versus-host circlianses, allergy, idiopathic thrombocytopenia, or osteoporosis of a 93870 protein and for identifying and/or evaluating modulacrs of a 1830 protein and for identifying and/or evaluating modulacrs of a 1830 protein and for identifying and/or evaluating modulacrs of a 1830 protein and for identifying and or or observation or one bused in content and evaluating condition or servation or gene therapy. This polymocleotide sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               81 TrpMetPheGlyLeuProPheCysLysPheValSerAlaMetLeuHisIleHisMetTyr 100
                                                                                                                                                                                                                                                                                                                                      New G-protein coupled receptor used in receptor assays as a target for diagnosis and treatment of receptor-mediated disorders, e.g. immune and inflammatory disorders, platelet disorders, skeletal or bone metabolism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  25 ATGCCTGGCCACAATACCTCCAGGAATTCCTCTTGCGATCCTATAGTGACACCCCACTTA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel polymucleotide encoding a guanosine triphosphate-binding protein coupled receptor (GPCR). A polymucleotide of the invention may have a use in gene therapy. The polymucleotide and polypoptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polymucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
